Introduction

Congratulations on purchasing one of the finest pieces of masonry equipment on the market today! If this is your first EZG Manufacturing product, you will not be disappointed. If you have previously owned an EZG Manufacturing product you will find the same high quality and dependability that you have come to expect from EZG Manufacturing.

About this Manual

The purpose of this manual is to inform the owner, employer, and the operators of the equipment, how to safely use this equipment, and make them aware of any hazards. It also contains important information regarding assembly, set up, use, and maintenance. It is the owner/employer's responsibility to make sure that anyone who uses this equipment understands all safety warnings. If you do not understand any items in this manual, please contact the dealer where this product was purchased or the manufacturer at the number listed throughout the manual. If you have any suggestions about how to make this manual easier to understand, contact the manufacturer. Keep this manual available for reference wherever this equipment is being used and make it available to any installers or operators.

General Information

Continuing improvements to the design of this kit may have caused changes that are not reflected in this manual. The information in this document is subject to change without notice.

Safety Information

The following safety symbols and signal words will be used throughout this manual and on the product. For your safety and the safety of others, please become familiar with their meaning and heed their warnings.

This symbol, either used alone or with a signal word, is used to call your attention to instructions involving your safety and/or the safety of others. Failure to follow these instructions could result in personal injury or death.

DANGER

This signal word is used to identify a hazard which, if not avoided, will result in death or serious injury.

WARNING

This signal word is used to identify a hazard which, if not avoided, could result in death or serious injury

CAUTION

This signal word is used to identify a hazard which, if not avoided, could result in minor or moderate injury.

NOTICE

This signal word is used to identify a hazard which, if not avoided, could result in property or equipment damage. It also may be used for special instructions related to performance, maintenance or general items.

Safety Precautions

NOTICE

WARNING

"Information shown in this manual is subject to change without notice. Any and all changes are at the authors discretion. Current manual revisions supersede previous revisions. Contact EZG Manufacturing for current revisions to manual."

Read and understand entire manual before installing or operating any EZG Manufacturing product. Failure to obey the following safety instructions could result in DEATH or SERIOUS INJURY.

For your safety and the safety of others, replace any missing or damaged warning decals by contacting the manufacturer at 1-800-417-9272.

Make sure anyone installing or using the system is thoroughly familiar with its operation. Keep all unauthorized and untrained personnel, especially children, away from the equipment.

The Hog Leg® Wall Brace System is designed to brace a masonry wall built in accordance with the Standard Practice for Bracing Masonry Walls Under Construction. A minimum of two (2) braces per wall panel are required, located 20% of wall length from each end of the panel. Wall panels are to be a maximum of 25'-0" long. Bracing requirements differ for reinforced and unreinforced walls, as well as the amount of reinforcement installed in each wall. Bracing requirements also differ based upon current and predicted maximum wind speeds until final structural connections are in place. Note that the information shown in this manual is designed to support reinforced masonry walls during the intermediate period of construction. For information on bracing unreinforced walls or for criteria for the initial period of construction, refer to the latest edition of Standard Practice for Bracing Masonry Walls Under Construction or contact a licensed Professional Engineer familiar with local and national codes.

The **Hog Leg**® Wall Brace is to be installed by trained employees under the supervision of a competent person.

All parts should be inspected before installation; any worn, damaged, or corroded parts should be taken out of service immediately and replaced.

Do not alter any part of the **Hog Leg**®.

Warning: This manual should be used as a reference for bracing, but not for final design. Before attempting to brace any wall, consult the latest edition of <u>Standard Practice for Bracing Masonry Walls Under Construction</u>, OSHA, or a local licensed Professional Engineer.

Warning: Minimum of 10" of overlap required on Hog Leg® Extension connection.

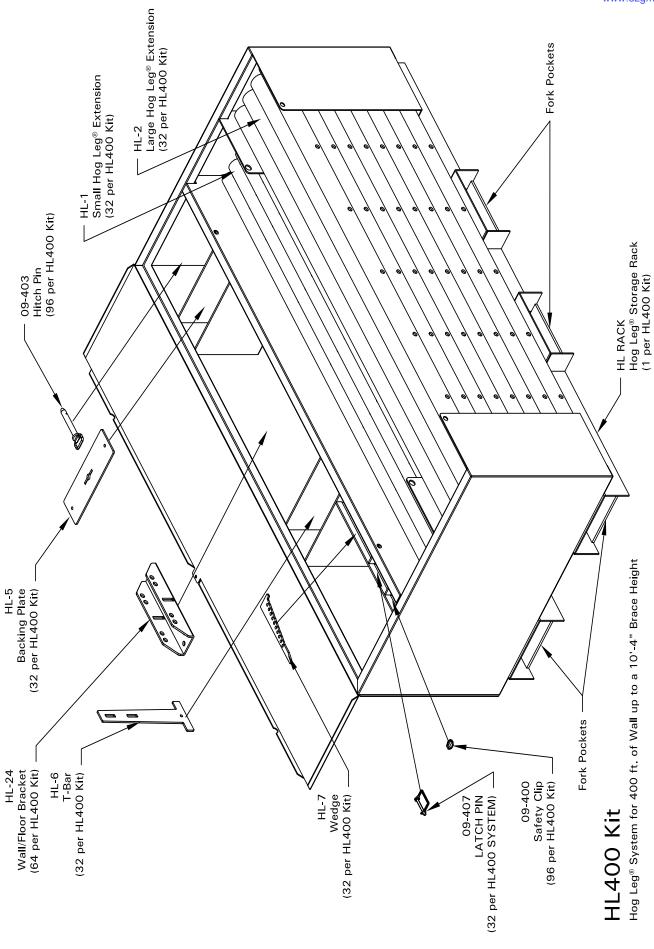

Warning: Restricted Access Zones must be established during the construction of masonry walls, as well as after wall bracing has been installed. These zones must be maintained by all trades until permanent supporting elements of the structure are in place. All employees working around masonry walls during construction must be aware of the evacuation wind speeds to know when to evacuate these zones. These wind speeds are described in <u>The Standard Practice for Bracing Masonry Walls Under Construction</u>.

EZG Manufacturing strongly recommends grouting in 4' to 6' lifts as the walls are being laid. Low lift grouting as the walls are being laid allows for fewer braces and an overall stronger intermediate structure as described in the Standard Practice for Bracing Masonry Walls Under Construction.

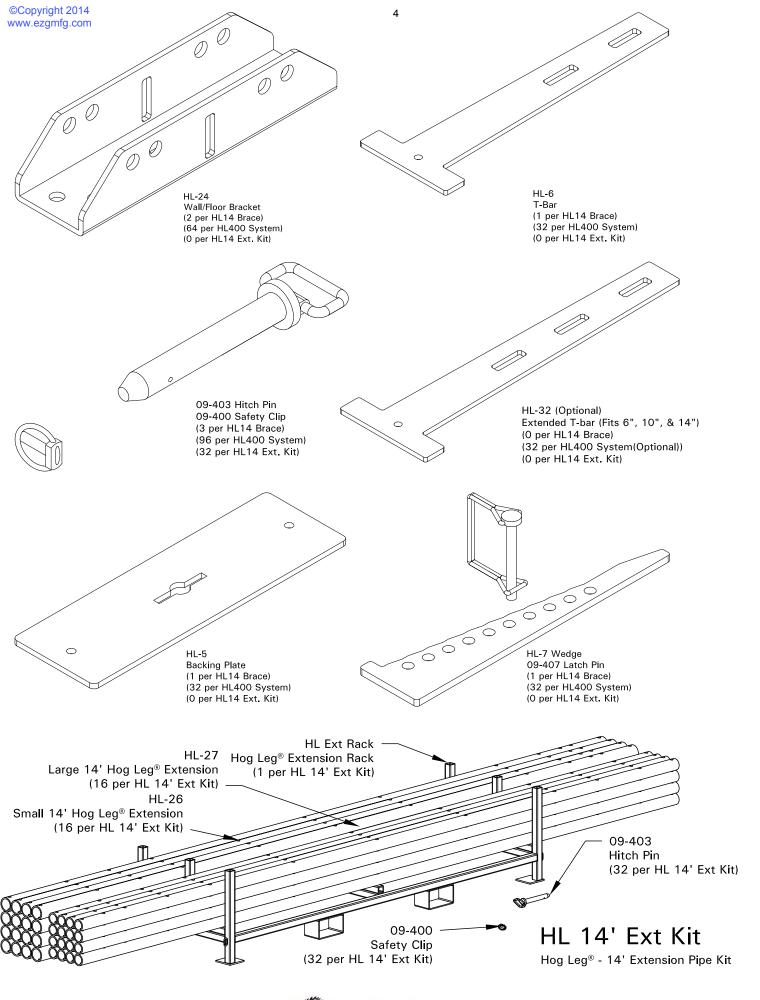

The data in this manual applies to the **Hog Leg®** Wall Brace only. Wall strength between connections, floor anchoring, deadman sizing, and site conditions are the responsibility of the Contractor. EZG Manufacturing strongly encourages the use of embedded deadmen as these are less suseptable to adverse and varying site conditions.

The data within this manual was developed with the aid of professional engineers and is specifically developed for use with the Hog Leg system. For more information on the engineering firm used to help create this guide, please see the final page of this manual. EZG Manufacturing makes no implications for use with other systems and complies with the <u>Standard Practice for Bracing Masonry Walls Under Construction</u> under reference to Sections 1.5 (page 12) and C1.5 (page 29).

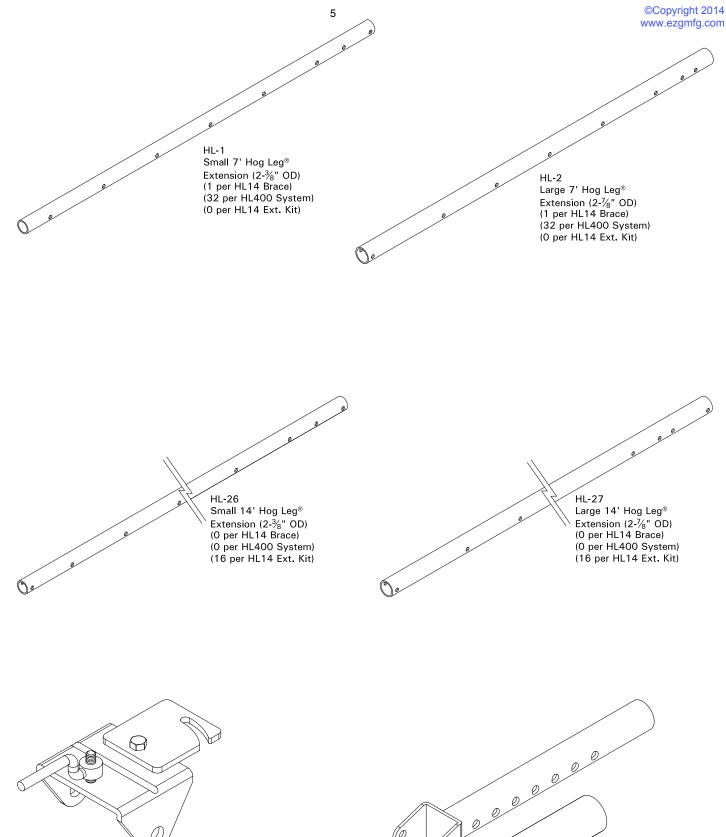

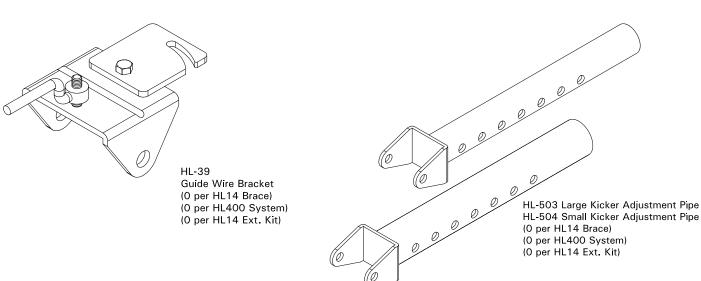

Installation of a Hog Leg®

The **Hog Leg**® Wall Brace System is designed to be constructed in sections starting from the Wall Bracket and working down to the floor anchor. Install each **Hog Leg**® Extension individually. Do not put **Hog Leg**® Extensions together before installing to Wall or Floor Bracket.

Wall Bracket Installation (Detail A): The Hog Leg® Wall Connection Bracket is designed to be placed as the wall is constructed.

The following illustration is a guideline for installation of the Hog Leg® Wall Brace.

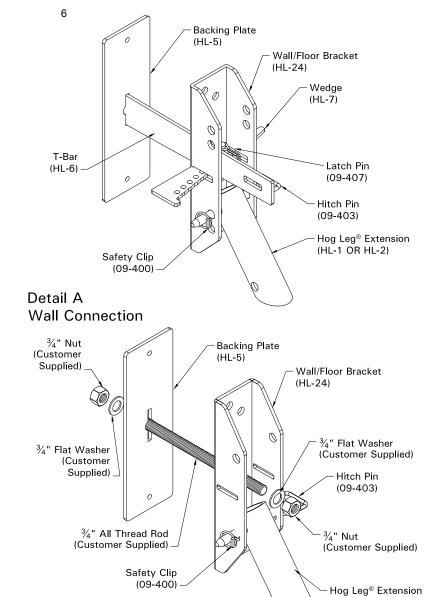

- 1) Determine the required bracing as defined by national and local codes. If not familiar with these codes consult a licensed Professional Engineer in your area to interpret the bracing standards and recommend a bracing plan.
- 2) As the masonry wall is being laid, install the Backing Plate (HL-5) against wall and slide T-bar (HL-6) through the backing plate and the head joint of the block. Then slide the Wall Bracket (HL-24) over the T-bar on the other side as shown in **Detail A**. Drive the Wedge (HL-7) through the T-bar until it tightens the Backing Plate and Wall Bracket against the sides of the wall. Install the Latch Pin (09-407) through the Wedge as close to the T-bar as possible.

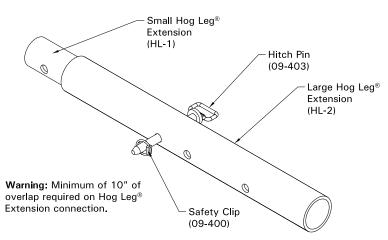

Wall Bracket Installation (Detail A Optional): Though it is recommended for ease of installation to use the Hog Leg® T-Bar and Wedge to install the Wall Bracket to the wall, a ³/₄" All Thread Rod can be used if desired.

- 1) Determine the required bracing as defined by national and local codes. If not familiar with these codes consult a licensed Professional Engineer in your area to interpret the bracing standards and recommend a bracing plan.
- 2) As the masonry wall is being laid, notch the corner of the block were the brace is to be installed to allow clearance to slide the All Thread Rod through.
- 3) Install the Backing Plate (HL-5) against wall and slide the All Thread Rod (Customer Supplied) through the backing plate and the notched head joint of the block. Then slide the Wall Bracket (HL-24) over the All Thread Rod on the other side as shown in **Detail A (Optional)**. Tighten nuts on both sides of the wall. Nuts should be tightened until the Wall Bracket and the Backing Plate are snug against the wall.

Extension Installation: For ease of installation, install Hog Leg® Extension to Wall Bracket. Then add Hog Leg® Extensions until reaching proper anchor location.

1) Align the holes in the end of the **Hog Leg®** Extension with the holes in the Wall Bracket and use the Hitch Pin (09-403) and Safety Clip (09-400) to attach as shown in **Detail A**.

Detail B Hog Leg® Extension Connection

Hog Leg® EZG Manufacturing 1-800-417-9272

Detail A (Optional)

Wall Connection

(HL-1 OR HL-2)

3)Continue adding **Hog Leg®** Extensions as shown in **Detail B** until the desired length is obtained. To locate where to pour the deadman for the base of the **Hog Leg®**, take the height of the brace installation and multiply by 0.75. **Example:** Brace Height of 16 feet x 0.75 = Brace Run of 12 feet from the wall.

CAUTION: Keep installation as close to the design guidelines shown in this manual as possible. If the brace is installed at a steeper angle or beyond 90° perpendicular to the wall, the holding power of the brace will be reduced.

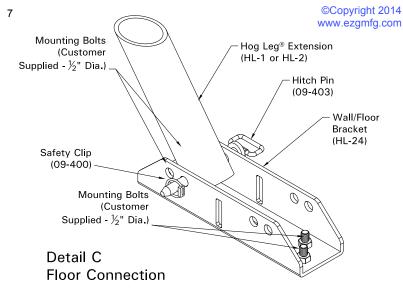

4) Secure the Floor Bracket with anchors that meet all applicable standards and regulations as shown in Detail C. Kicker Installation: For extreme wind speeds (greater th 40 MPH) or requirements that exceed Standard Practice for Bracing Masonry Walls Under Construction a kicker is required, on brace lengths 22'-11" or longer. For Brace Lengths longer than 26'-3" a Kicker is required for all circumstances. For extreme wind speeds (greater than 40 MPH) or requirements that exceed Standard Practice for Bracing Masonry Walls Under Construction a Kicker and Guide Wires are required, on brace lengths 26'-3". For Brace Lengths longer than 30'-5" a Kicker and Guide Wires are required for all circumstances. The Kicker should be installed at the midpoint of the Hog Leg® Wall Brace. The Kicker then extends downward at a 90° angle from the **Hog Leg**® Wall Brace and mounts to the wall. To determine wall height to install kicker, refer to page 10 of this manual. For Guide Wire installation, refer to page 11 of this manual.

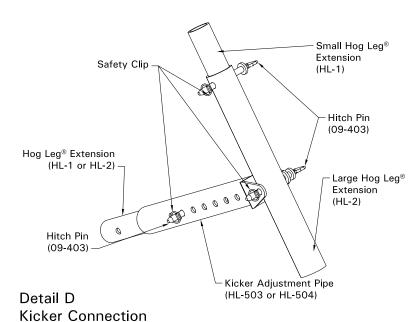

- 1) Install the Kicker Adjustment Pipe to the **Hog Leg**® by inserting the Hitch Pin through the **Hog Leg**® Extension and insert Safety Clip as shown in **Detail D**.
- 2) Add **Hog Leg**® Extensions as required to reach the Wall Bracket.

Removal of Hog Leg® Bracing

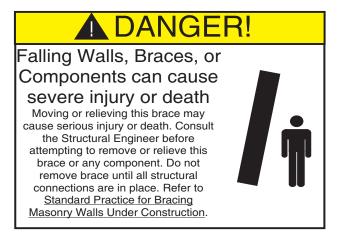

To comply with <u>Standard Practice for Bracing Masonry Walls Under Construction</u>, the **Hog Leg**® Bracing System must not be removed until the wall is permanently supported. You may refer to this standard in Chapter 3 Section 3.5 of the <u>Standard Practice for Bracing Masonry Walls Under Construction manual</u>.

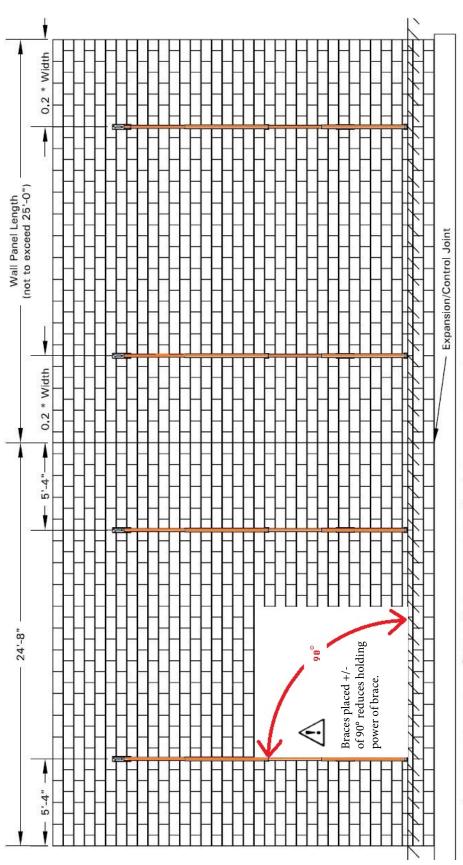

▲ WARNING!

Warning: Minimum of 10" of overlap required on *Hog Leg®* Extension connection.

Drawing 3: Hog Leg® Wall Brace Typical Brace Spacing

Note.

panels less than 25'-0" in length, braces are to be placed 0.2 times wall length from each end. For panels longer then 25'-0" additional bracing is Standard Practice for Bracing Masonry Walls Under Construction requires (2) braces per wall panel for a maximum panel length of 25'-0". For required.

Example:

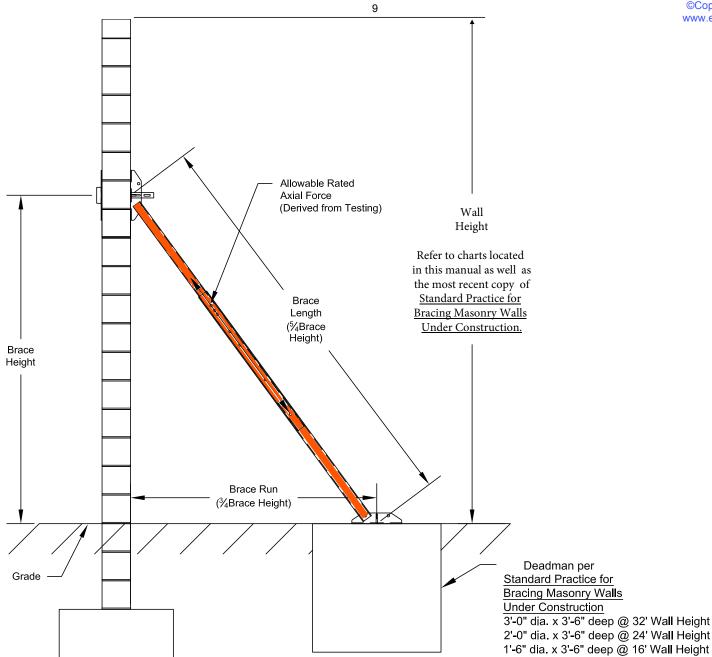

Determine brace spacing for a wall panel 20'-0" between expansion joints.

End Spacing = $20^{\circ}-0^{\circ}$ x $0.2 = 4^{\circ}-0^{\circ}$ from each end leaving $12^{\circ}-0^{\circ}$ between braces.

CAUTION: Keep installation as close to the design guidelines shown in this manual as possible. If the brace is installed +/- 90 degrees perpendicular to the wall, the holding power of the brace will be reduced.

Warranty

Limited Warranty

The manufacturer warrants that products manufactured shall be free from defects in material and workmanship that develop under normal use for a period of one year on all products from the date of shipment. The foregoing shall be the exclusive remedy of the buyer and the exclusive liability of the manufacturer. Our warranty excludes normal replaceable wear items, i.e. gaskets, wear parts, seals, O-rings, belts, drive chains, clutches, etc. Any equipment, part or product which is furnished by the manufacturer but manufactured by another, bears only the warranty given by such other manufacturer. (Manufacturer agrees to furnish free of charge a written description of problem or cause.) Warranty is voided by product abuse, alterations, use of equipment in applications for which it was not intended, use of non-manufacturer parts, or failure to follow documented service instructions. The foregoing warranty is exclusive of all other warranties whether written or oral, expressed or implied. No warranty of merchantability or fitness for a particular purpose shall apply. The agents, dealers, and employees of Manufacturer are not authorized to make modifications to this warranty, or additional warranties binding on the Manufacturer. Therefore, additional statements, whether oral or written, do not constitute warranty and should not be relied upon.

The Manufacturer's sole responsibility for any breach of the foregoing warranty provisions, with respect to any product or part not conforming to the Warranty or the description herein contained, is at its option (a) to repair, replace, or refund such product or parts upon the prepaid return thereof to location designated specifically by the Manufacturer. Product returns not shipped prepaid will be refused (b) as an alternative to the foregoing modes of settlement the Manufacturer's dealer may repair defective units with reimbursement for expenses. A written description of problem or cause must accompany all warranty claims.

Except as set forth herein above and without limitation of the above, there are no warranties or other affirmation which extend beyond the description of the products on the fact here of, or as to operational efficiency, product reliability, or maintainability or compatibility with products furnished by others. In no event, whether as a result of breach of contract or warranty or alleged negligence, shall the Manufacturer, be liable for special or consequential damages including but not limited to: Loss of profits or revenue, loss of use of the product or any associated product, cost of capital, cost of substitute products, facilities or services or claims of customers. Manufacturer does not assume responsibility for any accident due to equipment modification.

No claim will be allowed for products lost or damaged in transit. Such claims should be filed with the carrier within fifteen days.

Effective July 20, 2005

EZG Manufacturing is the exclusive manufacturer of the patented **Grout Hog**® Grout Delivery System the **Mud Hog**® Hydraulic Mixing Station, the **Hog Trough**® mud pan, the **Hog Cart**™, the **Hog Slopper**™, the **Booger Hog**® Wall Scrubber, the **Hog Leg**® Wall Brace System, the **Hog Crusher**™ Material Recycling System, and the **EZG MIXER**®.

HOG LEG[®] Wall Bracing Installation Charts

Warning: This manual should be used as a reference for bracing, but not for final design. Before attempting to brace any wall, consult the latest edition of Standard Practice for Bracing Masonry Walls Under Construction, OSHA, or a local licensed Professional Engineer. The data within this manual was developed with the aid of professional engineers and is specifically developed for use with the Hog Leg system. EZG Manufacturing makes no implications for use with other systems and complies with the Standard Practice for Bracing Masonry Walls Under Construction under reference to C1.5 page 29. Although many scenarios are listed, your conditions may vary. If at any time you need assistance, please call EZG Manufacturing at 800-417-9272.

Please note: the following charts references conditions that include but are not limited to:

- Walls that are braced are reinforced masonry walls within the Intermediate Period of construction. For bracing during the Initial Period, please reference the <u>Standard Practice for</u> <u>Bracing Masonry Walls Under Construction</u> or contact a licensed Professional Engineer familiar with local and national codes.
- ❖ A maximum wind speed of 40mph (industry standard for life safety requirements)
- A minimum of two (2) braces per 25 foot wall panel with properly installed braces placed at .2 times the wall length from each end.
- ❖ CMU with a minimum f'm=1500psi
- Properly sized deadmen.

NOTE: EZG Manufacturing strongly recommends both low lift grouting as the wall is being laid up and embedded deadmen.
